

# PINGALWARA: IN LETTER & SPIRIT

Manvir Kaur & Japman Kaur

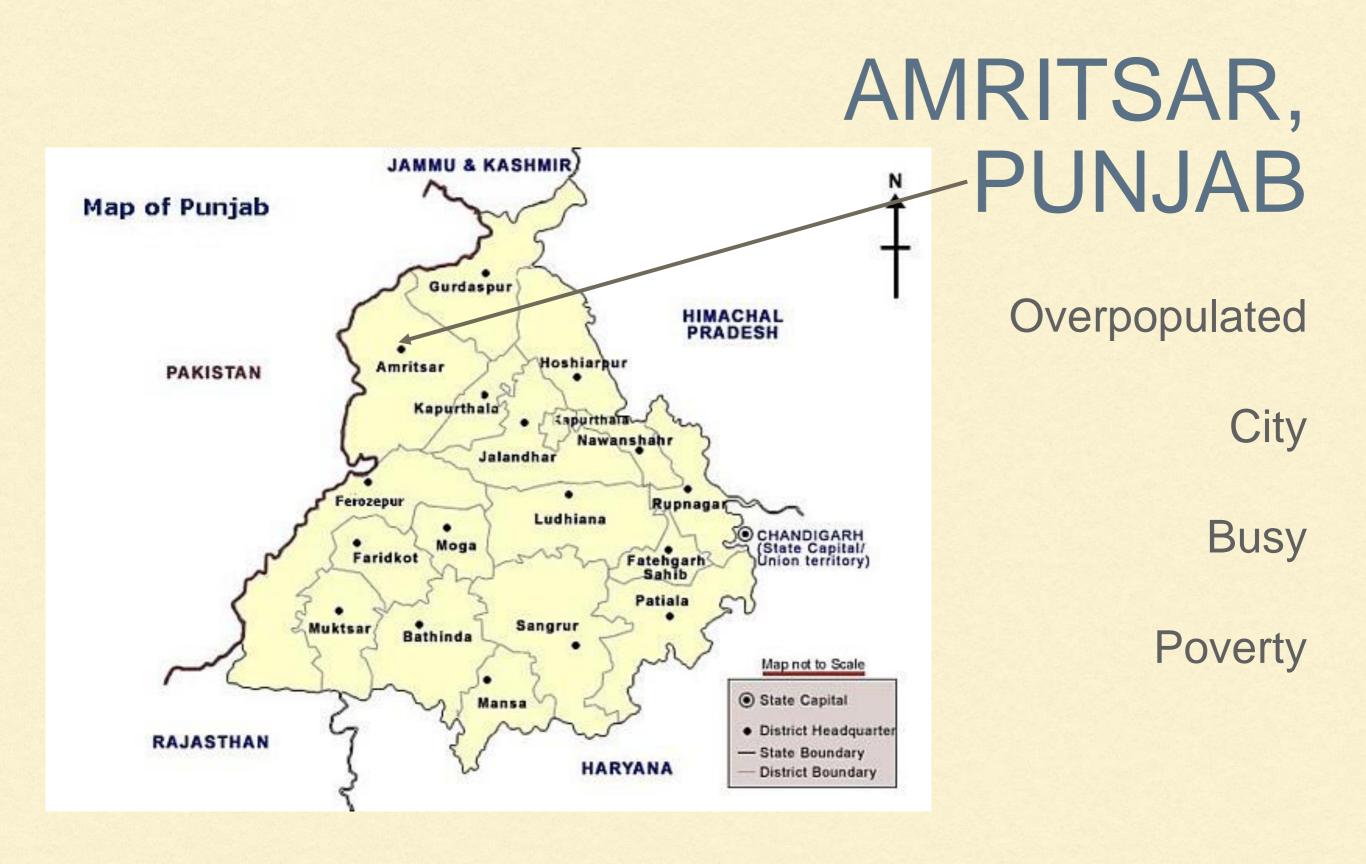

# THESIS PLANS

- Summer of 2016
- Six weeks
- Stayed mostly at Pingalwara
- Experience

PUNJAB, INDIA

# THE INDIAN CASTE SYSTEM

- India is structured with the caste system
  - Higher castes
    - Honor, respect, purity
  - Lower castes
    - disgust, untouchable
  - The influence and result of this caste system is used as the foundation for discrimination, selectivity, and helplessness for those belonging to a lower caste.

### STATISTICS

- India is one of the least inclusive countries with regards to individuals who have a disability (Isaac, 2005)
  - For the elderly in India who have a disability, there is limited availability of health facilities (Lahariya, Khandekar, Pradhan, 2012).
- Individuals aged 50 or older in lower castes experienced poorer health and higher levels of disability than those belonging to a higher caste (Kowal, Afshar, 2015)

-

# STATISTICS

Children born into lower castes are more vulnerable to obtain infections and diseases than individuals in a higher caste (Vart, Jaglan, Shafique, 2015)

- Suggests that the longer an individual is exposed to poverty and poorer conditions, the more likely the individual will experience a future disability or illness.
- Individuals with disabilities have a greater risk of physical, sexual, and emotional abuse and violence (Dawn, 2013).
  - Specifically, women with disabilities were the greatest at risk population for physical, sexual, and emotional abuse and violence (Dawn, 2013).

# PERCEPTION

 India is known for its stigma towards individuals with diseases and/or disorders.

- In a study of perceptions of people who had contracted tuberculosis, individuals still stigmatized patients even after completion of the treatment and being cured of tuberculosis. (Rajeswari,Muniyandi,Balasubramanian, Narayanan, 2005).
  - In fact, the stigma was still so relevant that some patients gave wrong names and addresses to avoid being connected to the conducted study (Rajeswari,Muniyandi,Balasubramanian, Narayanan, 2005).

# STIGMA OF DISABILITIES

- Many factors:
  - Little to no knowledge
    - Limited awareness of mental illness
  - Little to no recognition for disabilities
  - Lack of governmental aid
  - Limited facilities and hospitals for this population
  - Social "embrassement"

#### WHAT IS PINGALWARA?

- Pingalwara
  - Pingal = disabled
  - Wara = house
  - A house for the disabled
- An orphanage for individuals abandoned because of their disability, age, or sex.

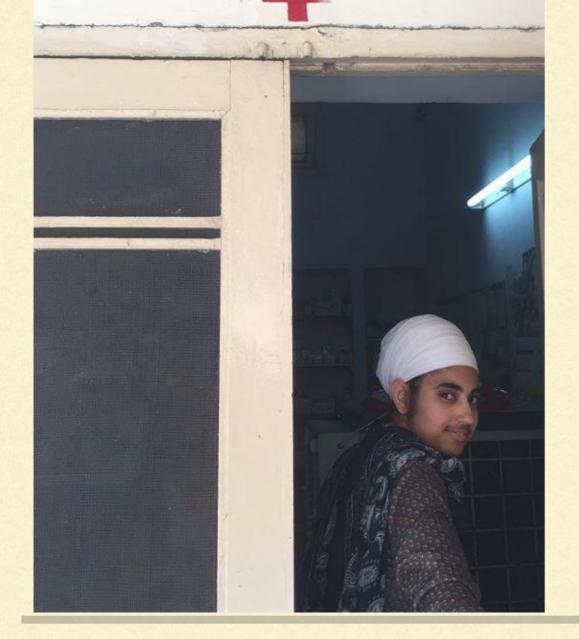

# PINGALWARA FACILITIES

- 8 Branches
- Organic Farm & Research Center
- Ambulances and Trauma Vans
- Prosthetic Centre
- Physical Therapy Centre
- Dental Care
- Eye Care

# ਡਿਸਪੈਂਸਰੀ DISPENSARY

# PINGALWARA FACILITIES

- Elderly Care Facility
- Typically Developing School
- School for the Deaf
- Special Education
  School

# PINGALWARA'S RESIDENTS

- Houses more than 1,000 residents:
  - Cognitively impaired
  - Polio, paralysis
  - Unable to hear
  - Elderly

TB

Physically impaired

# PINGALWARA'S RESIDENTS

- Blind
- AIDS/HIV
- Epilepsy
- Cancer
- Diabetes
- Typically developing children
